EDUCATION

RENSSELAER POLYTECHNIC INSTITUTE (RPI)

Expected June 2027

Bachelor of Computer Science (CS) & of Information Technologies and Web Sciences (ITWS)

Honor Societies: Upsilon Pi Epsilon (CS), Gamma Nu Eta (ITWS)

Cumulative GPA: 4.0/4.0

Relevant Coursework: *Physics 1, Principles of Software, Principles of Algorithms, Data Structures, Web Science & Systems Development, Discrete Mathematics, Linear Algebra, Computer Architecture & Operating Systems, Database Systems, Foundations of HCI, Data Science*

EXPERIENCE

MIT BEAVER WORKS SUMMER INSTITUTE (BWSI)

October 2026 - Present

Teaching Assistant

- Provided instruction and supervision for a group of students in a computational problem solving class.

MIT LINCOLN LABORATORY

May 2026 - August 2026

Research Internship

- Assigned to the Space Systems Analysis and Test Group, built a model from scratch that classified raw neuromorphic vision sensor data on GEO satellites as stable or tumbling in MATLAB.
- Investigated academic literature for existing methodologies, coded scripts to generate features from raw data, and experimented with different feature vectors and machine learning algorithms.
- Manually filtered, cleaned, labeled, and automated a workflow for processing the raw data from previous and one personally attended on-sky collects.

HUML HEALTH

May 2025 - August 2025

Software Engineer Internship

- Worked with software engineering team to deliver a platform for addiction recovery that acquired biometric data remotely across multiple rehabilitation facilities and processed it to optimize clinician care.
- Aided in optimizing their existing legacy code base and deployed 30 features and 20 bug fixes to production across their mobile app, web application, backend services, and database using React Native, React, Typescript, Node, AWS, Postgres DB and Prisma.

ALERTGY - GLUCOMETER TECHNOLOGY

September 2024 - December 2024

Software Engineer Internship

- Collaborated with engineering team to develop software that processed large quantities of data collected remotely via prototype wrist-bands made with embedded sensor systems and generated a patient's blood glucose.
- Refactored processes that automated data collection and streamlined laboratory testing using Python and Firebase. Analyzed sensor data using AI libraries such as Tensor Flow and SKLearn.
- Created and designed user interface for web application and mobile app to display and visualize live data readings using Figma, HTML, and CSS.

SOAPBOX HOSTING LLC

May 2024 - August 2024

Software Engineer Internship

- Engaged with software development team for a podcast hosting platform, deployed 20 updates to production for their web application including; new customer facing features, database schema alterations and migrations, and background workers that upload content to cloud storage automatically using Astro JS, React, and Prisma.

EXTRACURRICULARS

HELP HER STEM (RESEARCH PROJECT)

January 2024 - December 2024

Under Director of ITWS School Richard Plotka @ RPI

- Built an anonymous advice forum web-application for underrepresented gender minorities in STEM using React, Tailwind CSS, and an SQL database in a group of three.

HACK RPI

- (2024) Won hackathon division for 'Best App Development' for CENT-TRACK (educational financial tracker mobile-application.
- (2025) Won hackathon division for 'Ship Fast, Ship Often - Build a Payworthy MVP in a Weekend' for ACCESS-A-CITY, a disability inclusive event planner application using React Native.

UNION PROGRAMMING ACTIVITIES COMMITTEE (UPAC)

August 2023 – Present

(2023 - 2024) Concerts Division Treasurer; (2024 - 2025) Vice Chair; (2026 - Present) Chair

- Led operations and planning for one of RPI's largest scale student-run organizations. Collaborated with artists, vendors, and campus departments to put on and staff 60+ annual events and 100+ student activities, each drawing 100-500+ attendees. Events include major concerts, comedy shows, weekly movie nights, field days, and coordination of the student government election system.

Technical Skills: Python, C++, TypeScript, Javascript, React, React Native, Tailwind CSS, HTML/CSS, Node, AWS, Astro JS, Java, C#, Prisma ORM, Firebase, Tensor Flow, SKLearn, Procreate, FireAlpaca, Paint Tool Sai, Canva, MS Office.
